

MediScript-E — Project Presentation

3-Minute Optimized Slide Content

Slide 1 — Title (~15 sec)

MediScript-E Digital Healthcare Platform

- Live at: **mediscript-e.vercel.app**
- Stack: Next.js 16 · TypeScript · PostgreSQL · Groq AI
- Roles: Patient · Doctor · Admin

Slide 2 — Project Goal & Objectives (~20 sec)

The Problem: Paper appointments, lost prescriptions, missed medicines, scattered medical records.

The Goal: One unified platform connecting patients & doctors digitally.

Core Objectives:

- Online appointment booking & management
- Digital prescriptions with PDF download
- Automated medicine reminder emails (cron)
- Secure medical document storage
- AI assistant (MediBot) for platform help
- Multi-layer security: 2FA + RBAC + OAuth

Slide 3 — Feasibility Analysis (~20 sec)

Type	Result
Technical	✔ Next.js + Supabase + Vercel — proven, production-grade stack
Operational	✔ Role-based access, automated cron, admin oversight
Economic	✔ 100% free tier — Supabase, Vercel, Groq, Gmail SMTP
Schedule	✔ All features delivered following SDLC phases

Slide 4 — Models & Diagrams (~25 sec)

3-Tier Architecture:

ERD — Key Relationships: User **1:1** DoctorProfile / PatientProfile → **1:Many** Appointments, Prescriptions, Reminders, Vault

Appointment Status Flow:

5-Layer Security:

Slide 5 — Requirements (~25 sec)

Top Functional Requirements (59 total):

Actor	Requirement
Patient	Book appointments, view/download prescription PDF, set medicine reminders, upload to vault
Doctor	Confirm/cancel/complete appointments, issue/edit/archive prescriptions
Admin	Real-time dashboard stats, manage users, monitor all appointments
All	Login (Credentials/OAuth/2FA), MediBot chatbot, global search

Key Non-Functional Requirements:

- Pages load within 3 seconds · 99.9% uptime
- bcryptjs hashing · SSL/TLS · RBAC on every API route
- Fully responsive · TypeScript strict typing

Slide 6 — Project Screenshots (~20 sec)

Screenshot	What to Highlight
Landing_page_1.png	Clean landing page
Patient-Dashboard-overview-1.png	Patient's full dashboard
Doctor-Dashboard-overview-1.png	Doctor appointment & prescription management

Screenshot	What to Highlight
Admin-Dashboard-overview-1.png	Real-time admin stats
2FA-OTP-screen.png	Security — 2FA in action
MediBot.png	AI chatbot floating on page

Screenshots located at: public/MediScript-E_SS/

Slide 7 — UI/UX Features (~20 sec)

Design System: Teal Blue #1A6080 · Geist Font · Tailwind CSS 4 · Framer Motion

Key UX Decisions:

- Role-based dashboard — each role sees only their features
- Smooth page transitions + navigation progress bar
- Floating MediBot accessible on every page
- Confirmation dialogs for all irreversible actions
- Active sidebar route highlighting
- 350ms debounced global search with role-filtered results
- OAuth profile picture in navbar & sidebar
- One-click PDF prescription download

Slide 8 — Conclusion (~15 sec)

What Was Delivered:

-  59 functional requirements · 25 non-functional requirements — all met
-  3 roles · 9 database models · 25+ API routes
-  Live on Vercel: **mediscript-e.vercel.app**

Future Scope: Real-time notifications → Video consultation → Mobile app

"MediScript-E proves that a complete, secure, AI-powered healthcare platform can be built and deployed solo — by following a disciplined SDLC process."
